

A light, flexible, washable and resistant shoe, manufactured through direct injection, with no stitching or gluing between upper and sole. The shoe is made in one piece; with a non slip sole and unisex width, providing feet support with zero compression. The waist of the last allows even distribution of body weight between heel and toes. The upper is perforated to increase perspiration. The added support of a Velcro Strap warrants great fit, and the Velcro running through a plastic D-ring, warrants the great conservation and efficiency of the strap during MyCodeor[®] shoe life.

Manufactured according to CE ISO EN 20 347

Components	Material	Properties and benefits
1 upper	perforated natural leather covered with microfiber film.	<ul style="list-style-type: none"> • Perspiring • Easy maintenance • Durable • highly resistant to tearing and chemical products.
